Thrust-Weight:

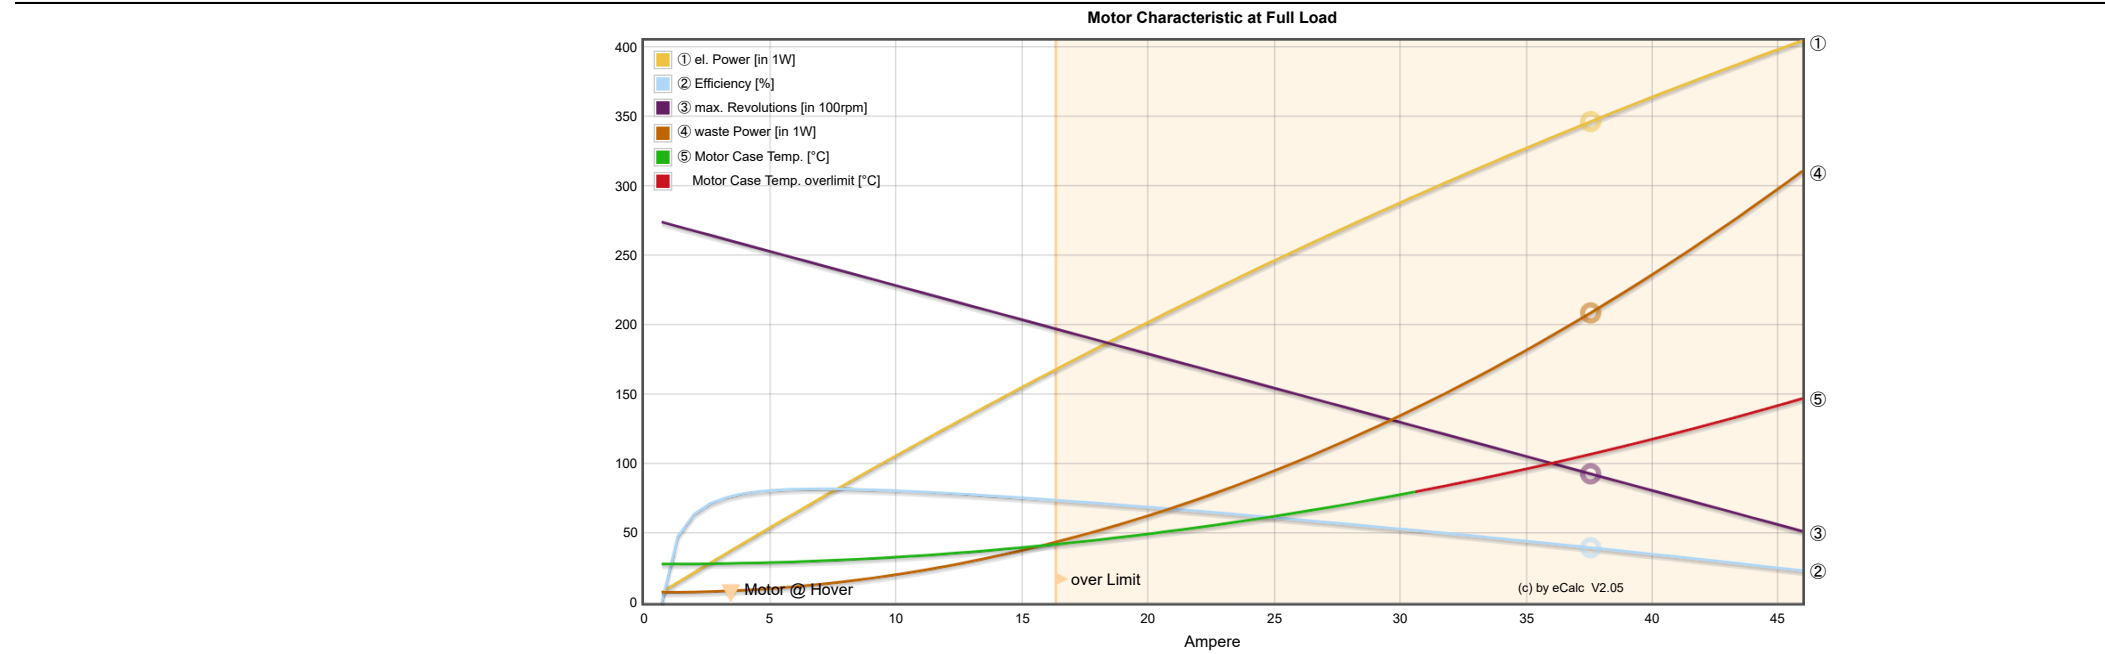

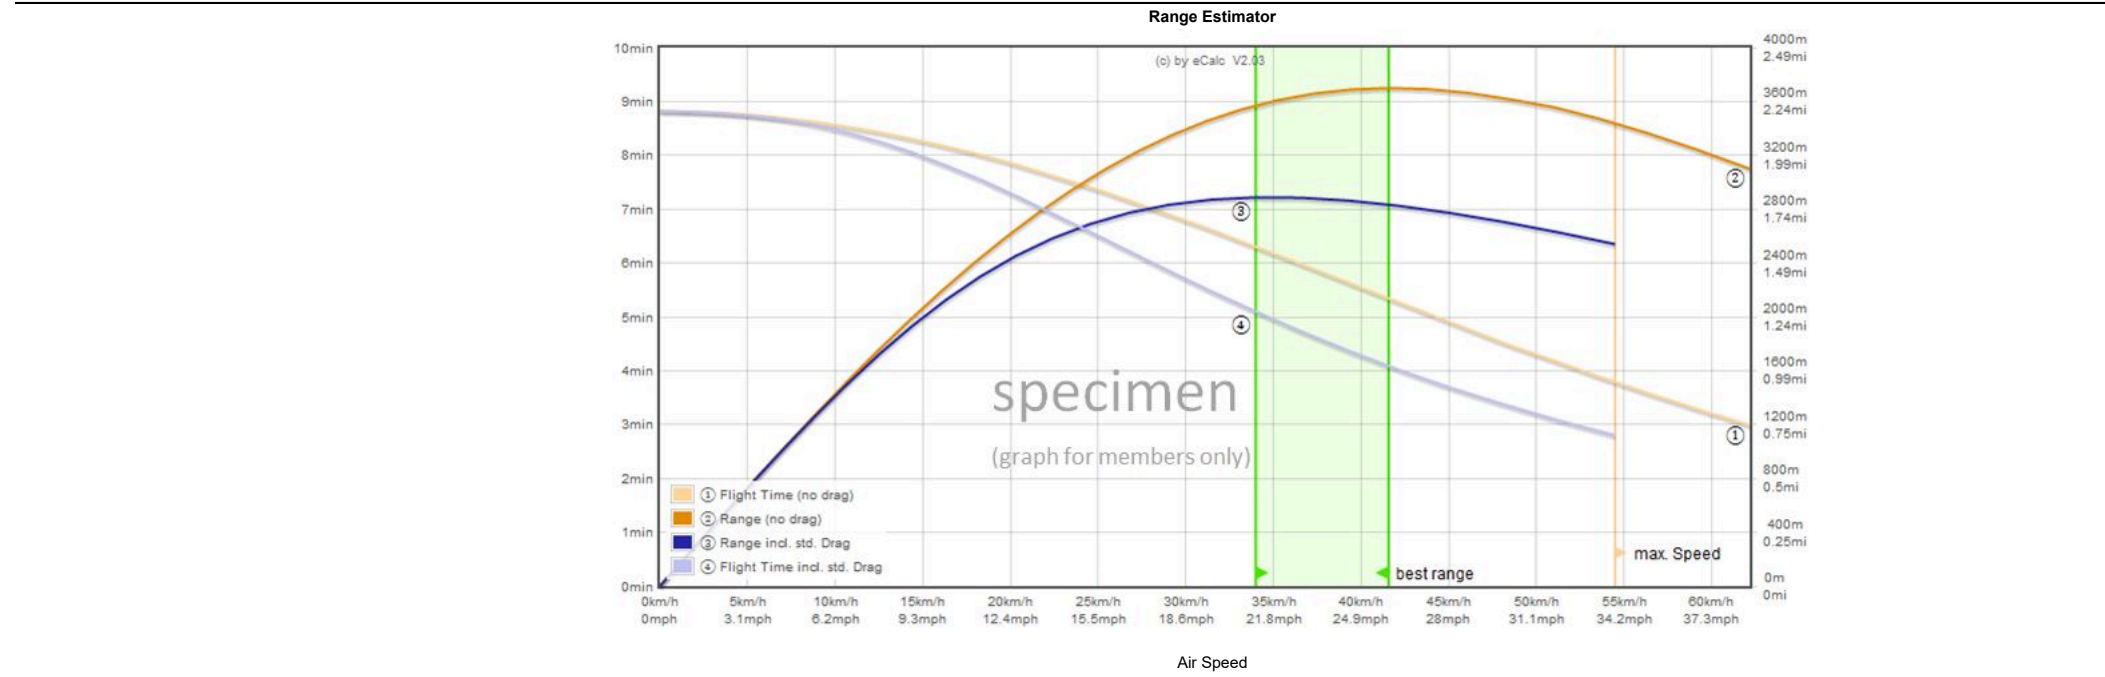

specific Thrust:

- Remarks:
- max. current is over the peak limit of the speed controller. Select a stronger ESC to avoid damage.
 - max. power over the limit of the motor. Please check the max. power limits defined by the manufacturer! (electric Power: 351.8 W > Limit (up to 15s): 150 W)
 - the prediction of the motor case temperature is critical (>80°C/175°F). Risk of overheat, please check!
 - Your Setup is unrealistic and way out of Limits!

Battery		Motor @ Optimum Efficiency		Motor @ Maximum		Motor @ Hover		Total Drive		Multicopter

Important Note:
Before flight recheck your max. current! If your Current, el. Power or RPM are over the manufacturers limits your motor, controller and/or battery may take damage! **Verify before flight by measurement!**
